DEPARTMENT OF ECONOMICS
PRESIDENCY UNIVERSITY

Ph.D. Coursework Syllabus
[One semester (6 months) course]

The PhD course would consist of five papers, aggregating to 16 credits. Four papers (viz. Research Methodology in Economics, Research and Publication Ethics, Econometric methods, and Data Management & Analysis) would be compulsory, in addition to which one paper should be selected from the optional papers offered.

Course	Type of Course	Type	Credits
ECON C1	Research Methodology in Economics	S	4
ECON C2	Research and Publication Ethics	S	2
ECON C3	Econometric Methods	T	4
ECON C4	Data management and analysis	S	2
ECON E1A	Advanced Econometric Methods	S	4
ECON E1B	Topics in Financial Economics	T	4
ECON E1C	Topics in Development Economics	S	4
ECON E1D	Advanced Economic Theory	T	4
ECON E1E	Topics in Mathematical Economics	T	4

Notes:

T stands for Theory which will be evaluated by semester end examination. (Full Mark: 50); while S stands for Sessional paper which will be evaluated continuously (Full Mark: 50)

ECON C1: RESEARCH METHODOLOGY IN ECONOMICS

Module 1: Methodology of Economics

Approaches of Karl Popper, Milton Friedman and others; Concepts of falsifiability, positivism, etc.

References

1. Mark Blaug (1980) The methodology of Economics.
2. Daniel Hausman (1992) The inexact and separate science of Economics.

Module 2: Planning empirical Research in Economics
   a) Steps in Empirical Research: Posing a question – Literature Review – Data collection – Econometric analysis – Writing a paper.
   b) Causal Explanation in Economics

References
   1. Wooldridge, J. M. (2016) Introductory Econometrics: A Modern Approach, South-Western College Publishers, Chapters 1, 19.
   2. Stock, J.H. & M. W. Watson (2015) Introduction to Econometrics, Pearson, Edinburg: Chapter 1.

Module 3: Experiments and Quasi-experiments:
   a) History, Basics of Experimental Methods, Advantage and Limitation.
   b) Potential Outcomes, Causal Effects, and Idealized Experiments
   c) Threats to Validity of Experiments
   d) Quasi-Experiments and their limitations
   e) Experimental and Quasi-Experimental Estimates in Heterogeneous Populations
   f) Randomized Control Trial
   g) Select examples

References
   1. Stock, J.H. & M. W. Watson (2015) Introduction to Econometrics, Pearson, Edinburg: Ch. 13.
   2. Davis, D.D. and C.A. Holt (1993) Experimental Economics, Princeton University Press.
   3. Angus Deaton (2010): "Instruments, Randomization, and Learning about Development" *Journal of Economic Literature* 48: 424–455.
   4. Abhijit V. Banerjee and Esther Duflo (2009): "The Experimental Approach to Development Economics", *Annual Review of Economics*, Vol. 1: 151-178.
   5. Dani Rodrik (2008): "The New Development Economics: We Shall Experiment, But How Shall We Learn?"
   6. Angus Deaton and Nancy Cartwright (2016): "Understanding and Misunderstanding Randomized Controlled Trials", NBER Working Paper W22595.
      Dina Pomeranz (2017): Impact evaluation methods in public economics.

ECON C2: RESEARCH AND PUBLICATION ETHICS

Module 1: Philosophy and Ethics

a) Introduction to philosophy: Definition, nature and scope, concept, branches

b) Ethics: Definition, moral philosophy, nature of moral judgments and reactions

Module 2: Scientific conduct

a) Ethics with respect to science and research

b) Intellectual honesty and research integrity

c) Scientific misconducts: Falsification, Fabrication, Plagiarism (FFP)

d) Redundant publications: Duplicates, and overlapping publications, salami slicing

e) Selective reporting and misrepresentation of data

Module 3: Publication ethics

a) Publication Ethics: Definition, introduction and importance

b) Best Practices / standard setting initiatives and guidelines: COPE, WAME, etc.

c) Conflicts of interest

d) Publication misconduct: Definition, concept, problems that lead to unethical behaviour and vice versa, types

e) Violation of publication ethics, authorship, and contributor ship

f) Identification of publication misconduct, complaints and appeals

g) Predatory publishers and journals

Module 4: Open Access Publishing

a) Open access publications and initiatives

b) SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies

c) Software tool to identify predatory publications developed by SPPU

d) Journal finder / journal suggestion tools viz. JANE, Elsevier Journal Finder, Springer Journal Suggester, etc.

Module 5: Publication Misconduct

A. Group Discussions

   a) Subject specific ethical issues, FFP, authorship

   b) Conflicts of interest

   c) Complaints and appeals: examples and fraud from India and abroad

B. Software tools

  Use of plagiarism software like Turnitin, Urkund and other open-source software tools

Module 6: Databases and Research Metrics

A. Databases

   a) Indexing databases

   b) Citation databases: Web of Science, Scopus, etc.

B. Research Metrics

   a) Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, CiteScore

   b) Metrics: h-index, g index, i10 index, altimetric

ECON C3: ECONOMETRIC METHODS

Module 1: Multiple Regression Analysis
   a) Review of Multiple regression analysis
   b) Model Evaluation and Diagnostic Tests
   c) Endogeneity and Instrumental Variable method

References
   1. Wooldridge, J. M. (2016) Introductory Econometrics: A Modern Approach, South-Western College Publishers: Chapters 3-9.

Module 2: Limited Dependent Variable Models
   a) Binary Choice Models: Linear Probability Model, Probit and Logit Models, Censored and Truncated Regression Models
   b) Multinomial Response Models: Multinomial and Ordered models, Sequential Response Models, Nested logit

References
   1. Cameron A. C. and P. K. Trivedi (2009) Microeconometrics using Stata: Methods and Applications, Stata Press, College Station, Texas: Chapter 6.

   3. Long, J. S. And J. Freese (2014) Regression Model for Categorical Dependent Variables using Stata. Stata Press, College Station, Texas, 3/e: Chapters 5-8.
   4. Greene, W.H. (2017) Econometric Analysis, Prentice Hall.

Module 3: Time Series Analysis

   a) Stochastic Time Series and Stationarity: Box-Jenkins Methodology of Stationary Time Series Analysis; Time Series with Trend - Deterministic and Stochastic Trend; Tests of Unit Root

   b) Modelling Volatility: ARCH and GARCH Model

   c) VAR Analysis: Estimation and Identification - Granger Causality - Cointegration and Error Correction Models

References

   2. Stock, J.H. & M. W. Watson (2015) Introduction to Econometrics, Pearson, Edinburg: Chapters 14-16.
   3. Lutkepohl, H. & M. Kratzig (eds) Applied Time Series Econometrics, Cambridge University Press, 2004 Chapters 3-4.

Module 4: Panel Data Analysis

   Static panel data analysis: Random Effect Model, Fixed Effect Model, Hausman Test

References

   1. Hsiao, C.: Analysis of Panel Data, Cambridge University Press
   2. Arrelano, M.: Panel Data Econometrics, OUP

ECON1C4: DATA MANAGEMENT AND ANALYSIS

Module 1: Data collection

Designing questionnaire, Data entry software
Secondary data sources: NSSO, Census, DHS, IHDS, RBI, WDI, PROWESS, etc.

Module 2: Analysis of data using software:

   a) R: Basics of R, Data management, Graphics, Statistical and econometric analysis
   b) STATA: Data management and analysis, Econometric analysis
   c) SPSS: Data management and analysis, Multivariate analysis
   d) EVIEWS: Data management and analysis, Econometric analysis

NOTE: R and any one software according to requirement

Module 3: Presentation of analysis

Presenting results of analysis using power point.

ECON E1A: ADVANCED ECONOMETRICS

Module 1: Advanced Panel Data Analysis
a) Endogeneity in Panel data models
b) Dynamic panel data model: Endogenity, Anderson-Hsiao, Arrelano-Bond model
c) Panel co-integration*

References:
3. Wooldridge, J. M. (2016) Introductory Econometrics: A Modern Approach, South-Western College Publishers: Chapters 13, 14.
4. Stock, J.H. & M. W. Watson (2015) Introduction to Econometrics, Pearson, Edinburg: Chapter 10.

7. Arrelano, M.: Panel Data Econometrics, OUP
8. Maddala, G. S. & Kim, In-Moo: Unit Roots, Cointegration, and Structural Change, Cambridge University Press
9. Stata Manual: xtivreg and xtabond

Module 2: Spatial Econometrics
   a) Exploratory Spatial data analysis
   b) Weight matrix
   c) Spatial matrix: Estimation, Hypothesis testing, marginal effects, interpretation, models election.

References:
   1. Anselin, L. and S. J. Rey (2014), Modern spatial econometrics in Practice GeoDa Press, Chicago.
   2. Anselin, Luc. "Spatial Effects in Econometric Practice in Environmental and Resource Economics." *American Journal of Agricultural Economics*, vol. 83, no. 3, 2001, pp. 705–710.

Module 3: Simultaneous Equation Systems
   a) Scope of SEM
   b) Identification problem
   c) Estimation problem

References
   1. Woolridge, J.M. (2002) Econometric Analysis of Cross Section and Panel Data, The MIT Press. Chapter 9.

Module 4: Non-parametric methods
   a) Kernel density estimation
   b) Kernel regression
   c) Semi-parametric regression

References

ECON E1B: TOPICS IN FINANCIAL ECONOMICS

The course delivers the concepts and models underlying the modern analysis and pricing of financial assets, particularly derivatives that would help the student to develop foundation for understanding financial markets and derivatives in general. Students would learn, simultaneously, the methods to handle financial data to solve problems related to the field.About 4-5 modules will be covered.

Module 1: Overview of Financial Markets, stylized facts – non-normality, fat tails, volatility clustering, long memory and chaos.

Module 2: Modelling the behaviour of asset prices: Markov property, continuous time stochastic process, Ito's lemma, log normal properties, jump diffusion model, stochastic volatility models, Martingales and measures.

Module 3: Hedging strategies with financial markets: forward, futures and options, arbitrage and risk neutral pricing, the Greeks and hedging schemes, Exotic Options and hedging issues, Real Options.

Module 4: Trading strategies in financial markets: cross section and time series momentum trading strategies

Module 5: Interest rate derivative, credit derivatives, Insurance, weather and energy derivatives; derivative mishaps
Software to be used: Eviews, Stata

Module 6: Role of Financial Intermediaries

Module 7: Macro-economic consequences of Financial Imperfections

References:
1. Hull, J. C. (2014), Options, Futures and other derivatives, Pearson, 9th Ed.

5. Wu, L. (2009), Interest Rate Modelling: Theory and Practice, Chapman and Hall /CRC Financial Mathematics Series, 1st ed.

6. Freixas, Xavier (2008) Microeconomics of Banking, MIT Press, 2e.

Other references would be provided as and when necessary.

ECON E1C: TOPICS IN DEVELOPMENT ECONOMICS

The syllabus consists of different modules on advanced topics in development economics out of which, any 2-4 modules will be offered in any particular semester, depending upon the availability of the resource person(s) and the interest of the enrolled research scholars. If required, additional modules may be introduced.

Module 1: International Trade and Development
Module 2: Poverty and inequality
Module 3: Urbanisation and development
Module 4: Rural development
Module 5: Labour and migration
Module 6: Environment and development
Module 7: Health and education
Module 8: Gender, community and development
Module 9: Governance and the political economy of development

ECONE1D: ADVANCED ECONOMIC THEORY

Module 1: Game theory and mechanism design

a) Game tree; strategies; subgame perfection; backward induction in finite games; commitment; bargaining; other applications
b) Repeated Games: Finitely repeated games and backward induction; infinitely repeated games; history dependent strategies; one-step deviation property; the repeated Prisoners' dilemma; idea of folk theorem.
c) Dynamic games with complete information
d) Static games with incomplete information: Strategies; Bayesian Nash equilibrium; auctions; other applications
e) Dynamic games with incomplete information: Strategies; beliefs and sequential equilibrium; applications
f) Bargaining: Bargaining as an extensive game, Axiomatic approach due to Nash, Relation between strategic and axiomatic approaches, illustrations
g) Mechanism design: Screening, Bayesian mechanism design, Dominant Strategy Mechanisms, Incentive Compatibility, Transferable Utility

Module 2: Advanced Macroeconomic Theory
   a) Reaction against Keynesian economics: Chicago monetarism, New Classical Macroeconomics, Complete Information Finance theory
   b) Dynastic (Ramsey) and overlapping generations models
   c) Real Business Cycles
   d) Dynamic Stochastic General Equilibrium model
   e) Structuralist Finance and Money
   f) Topic in Open Economy Macroeconomics
   g) Endogenous growth models

ECONE1E TOPICS IN MATHEMATICAL ECONOMICS

Module 1: Introduction to Mathematical Thought Process: Reading and Doing Proofs
   a) Proofs and Logic
   b) The fundamental proof techniques-The forward –backward method; Definitions and Mathematical terminology; Quantifiers; the Contradiction method, the Contrapositive Method and Induction
   c) Introduction to other mathematical thinking process---Generalization, Creating Mathematical Definitions, Axiomatic Systems

Module 2: Advanced Set Theory
   a) Sets and Functions
   b) Metric Spaces

Module 3: Point Set Topology
   a) Examples of Topological Spaces

b) Continuity and Compactness
c) Application: Existence of equilibrium

Module 4: Dynamic Optimization
a) Examples of Economic Problems involving Dynamic Optimization in Continuous and Discrete Time
b) Optimal Control Theory
c) Fixed Endpoint Problems
d) Various Endpoint Problems
e) Discounting Current Values and, Comparative Dynamics
f) Infinite Horizon Problems
